## **Mission: To make transport in the UK more sustainable**

We help people and organisations to meet their travel needs in ways that support community well-being, protect and enhance the environment and improve public health.

We're focused on building expertise and experience in travel behaviour change and transport demand management - by providing training and events, tools and resources, marketing support and collaborative partnerships.

We support UK organisations of all sizes seeking to shift away from single-occupancy car use and increase the uptake of walking, cycling, public transport and shared transport.

# Conference Theme Description

The Covid landscape in transport and urbanism has brought in a host of changes – some positive, some negative and some still with a high degree of uncertainty. Rather than just letting things go ‘back to normal’ or change for the worse, we have an opportunity to shape our future according to a positive vision, building upon models developed in Paris, Melbourne and those much closer to home.

We have learned to appreciate the sense of place and sense of community that comes with spending more time locally. We have rediscovered walking and cycling, with councils taking steps to make active travel more viable for more journeys. We have found that so many of our previous trips were not as necessary as we had assumed.

At this conference, we will take the next step and focus on cutting-edge measures that can be introduced to support these positive trends, and to discourage a return to ‘the old normal’.
